

XPREZZON™

Shaping the future of monitoring for patients

Stylish

A modern and innovative design provides an appealing and comfortable experience for both patients and their families. The sleek, frameless display makes cleaning easier to minimize the risk of infection.

Reassuring

Connecting clinicians with fast access to patient information. They can make care decisions from anywhere, inside or outside the hospital. This continuity of care to always be near provides reassurance and confidence to patients and their families.

Versatile

Ergonomic and versatile mounting solutions enhance the overall appearance of the care environment. Various solutions for both monitor and cable management ensure a more organized and efficient workflow at the bedside.

Sensitive

XPREZZON is the first patient monitor sensitive to a patient's need for a good night's rest. It intuitively dims the display in low ambient light.

Introducing XPREZZON™.

The future of connecting
clinicians with patient
information starts here.

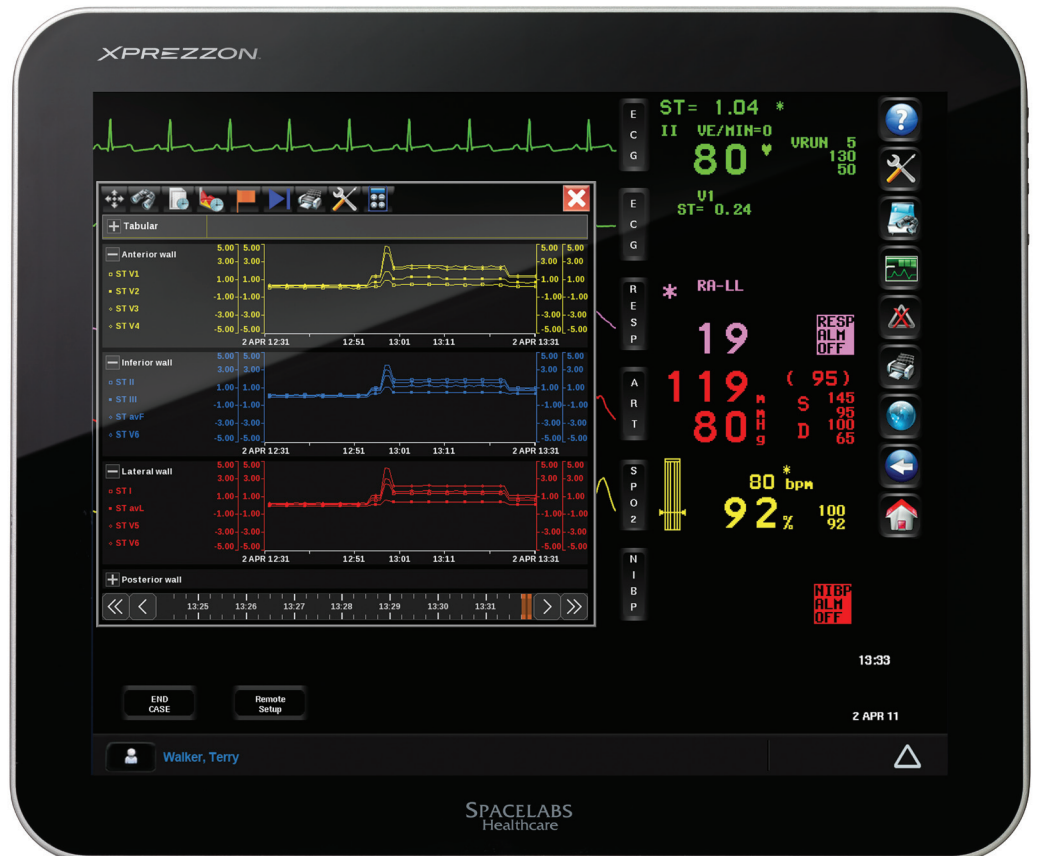

XPREZZON, from
Spacelabs Healthcare,
combines a legacy of
proven performance
with the ultimate fusion
of form and function.

Caregivers enjoy
complete access to
critical information,
anywhere/anytime they
have mobile access.

XPREZZON delivers
innovative technology
and design, to shape
the new age of care
for clinicians and
patients alike.

Trendy

A high-resolution screen displays crisp and visually rich Custom Trends which enable faster and better informed patient assessment. With a single touch, clinicians can access different trend views based on observation needs, type of procedure, or clinical protocols. Trends can be displayed continuously on the bedside monitor for real-time updates of critical patient information. They can also be sized and arranged as preferred, providing clinicians with their own uniquely customized views.

Anywhere

Your patient's information in the palm of your hand. The unique ability to see your patient's monitored information anywhere you have mobile access. Whether inside the hospital or on the go, clinicians can stay connected with their patient data. Spacelabs' innovative ICS XPREZZ™ provides the ultimate freedom and confidence – access to patient information on a clinician's mobile device.

Enlightened

The sleek, frameless display integrates highly visible LED alarm lights. These illuminate in the front and rear, enhancing the clinician's ability to identify which monitor is alarming in the busy care environment.

Connected

XPREZZON reaches a new height of connectivity while protecting customers' investments in previous generations of Spacelabs patient monitoring and information systems. Fully backward compatible, XPREZZON presents a seamless transition between platforms. It also features a highly intuitive touch screen user interface, universal to all Spacelabs patient monitors, to simplify learning and promote the continuity of workflow.

The ultimate expression of performance and design

Expansive

XPRESSON provides easy access to patient data, creating an expansive “information gateway” at the point of care for the clinician. The optional dual-display configuration, with Spacelabs Dynamic Network Access™ (DNA) allows a dedicated full screen view of physiologic information plus a secondary screen for charting and other clinical applications - eliminating the need for an additional computer at the bedside.

XPRESSON™

Connect to care...to always be there.
